BIO

Product-minded software engineer who ships user-facing features end to end, from API design to frontend polish, in close collaboration with design and product. Known for fast, well-instrumented launches that hold up under real traffic.

EXPERIENCE

Software Engineer, Northwind Analytics, Growth team, Chicago, IL 03/2023–Present

- Led engineering for the real-time dashboards launch, the company's most-requested feature, partnering with design and product from prototype through GA for 800+ customer accounts.
- Cut p99 API latency 60% by profiling hot paths, adding query-level caching, and rewriting the database access patterns of the two worst-offending endpoints.
- Mentored two interns and a new-grad engineer through their first production launches; wrote the onboarding guide now used across the organization.

Tech Stack: Go, TypeScript, Kafka, Postgres, Redis, Kubernetes, Grafana

Software Engineer, Lakeshore Labs, Chicago, IL 07/2020–03/2023

- Shipped the customer-facing usage-analytics feature end to end (React, TypeScript, Node.js), which became a top-three driver of enterprise renewals.
- Introduced contract testing and CI gates across three services, roughly halving production incidents caused by integration bugs.
- Interviewed and onboarded engineers as the team grew from 4 to 11.

Tech Stack: TypeScript, Node.js, React, Postgres, Docker, Kubernetes

PORTFOLIO PROJECT

Transit Delay Tracker — open-source project (2025) github.com/alexrivera-example/transit-tracker

- Built and launched a web app answering a real commuter question, “should I leave now or wait?”, from live transit feeds; 1,200 weekly users and a public API.
- Wrote the data pipeline handling schedule changes and feed outages; open source with CI and a reproducible local setup.
- Iterated the UI from user feedback collected in a public issue tracker; published a technical write-up of the architecture.

Tech Stack: Go, Redis, Postgres, React, GitHub Actions

EDUCATION

BS in Computer Science, State University 2020

- Undergraduate research in the Data Systems Lab; teaching assistant for the databases course.

SKILLS & EXPERTISE

Systems & Infrastructure: Kafka; Kubernetes; Redis; gRPC; Observability (Prometheus, Grafana); Performance & Load Testing; CI/CD

Product & Web: React; TypeScript; Node.js; REST & GraphQL API Design; Instrumentation & Feature-Flag Rollouts

Collaboration: Design Partnership; Mentoring; Technical Writing; Interviewing & Onboarding

Languages: TypeScript, JavaScript, Go, Python, SQL
