BIO

Software engineer with five years of experience building backend services and the product features on top of them. Comfortable owning a feature from API design through frontend delivery, with a track record of improving reliability and performance along the way.

INDUSTRY EXPERIENCE

Software Engineer, Northwind Analytics, Platform team, Chicago, IL 03/2023–Present

- Redesigned the ingestion service behind customer dashboards, moving from batch polling to a streaming pipeline (Kafka, Go) and cutting data freshness from 15 minutes to under 30 seconds at 20K events/sec.
- Cut p99 API latency 60% by profiling hot paths, adding query-level caching, and rewriting the database access patterns of the two worst-offending endpoints.

Tech Stack: Go, TypeScript, Kafka, Postgres, Redis, Kubernetes, Grafana

Software Engineer, Lakeshore Labs, Chicago, IL 07/2020–03/2023

- Built the metering and usage-aggregation service (Node.js, Postgres) behind customer-facing analytics, processing 5M events per day with exactly-once semantics.
- Led the migration from a legacy cron-based monolith to containerized workers on Kubernetes, cutting deploy time from 45 minutes to 5 and enabling per-service scaling.
- Interviewed and onboarded engineers as the team grew from 4 to 11.

Tech Stack: TypeScript, Node.js, React, Postgres, Docker, Kubernetes

PORTFOLIO PROJECT

Transit Delay Tracker — open-source project (2025) github.com/alexrivera-example/transit-tracker

- Built a Go service ingesting live transit feeds (2M+ records/day) with Redis caching and Postgres storage, running with full observability on a \$5/month VPS.
- Wrote the data pipeline handling schedule changes and feed outages; open source with CI and a reproducible local setup.
- Load-tested and tuned the ingestion path to absorb 10x feed bursts during citywide service disruptions.

Tech Stack: Go, Redis, Postgres, React, GitHub Actions

RESEARCH EXPERIENCE

Research Assistant, Data Systems Lab, State University 09/2018–06/2020

- Co-authored a workshop paper on adaptive query optimization; implemented the prototype and ran all experiments.
- Maintained the lab's shared experiment infrastructure used by six graduate students.

Tech Stack: C++, Python, Slurm, Linux

EDUCATION

BS in Computer Science, State University 2020

- Undergraduate research in the Data Systems Lab; teaching assistant for the databases course.

SKILLS & EXPERTISE

Systems & Infrastructure: Kafka; Kubernetes; Redis; gRPC; Observability (Prometheus, Grafana); Performance & Load Testing; CI/CD; Incident Response & On-Call

Product & Web: React; TypeScript; Node.js; REST & GraphQL API Design; Instrumentation & Feature-Flag Rollouts

Languages: Go, TypeScript, Python, SQL, C++
